Why Use Synthasys?

Experience and Knowledge
Synthasys provides tenured business professionals with JD Edwards application and technical knowledge combined with industry experience.

Service Proposals
We will provide valid, realistic proposals created from experience, scope identification and business understanding. Accurate proposals help your budget planning.

Service Rates
Premier services should not cost premium rates. We realize the high cost of other professional consulting firms, and we aim to provide superior services at extremely competitive rates.

Value-Added Services
Synthasys is a "value-added" service provider. We want you to have the highest return on your investment. We can evaluate and analyze your organization's requirements, policies, procedures and system use. Providing efficiency and value to your processes is our goal.

Responsiveness
We return your calls in a timely manner. Whether it's a return call to address your concerns, schedule resources or answer a question, you are our first priority.

www.synthasys.com

Synthasys is an independent professional services firm dedicated to partnering with our clients to develop and execute IT solutions that best fit your organizational requirements and goals.

Corporate Culture

- The principles of our organization are based on providing our clients with experienced business professionals with specific, thorough knowledge of the JD Edwards module they support.

- Synthasys believes in giving our clients the highest return on investment.

- We strive to exceed your company's expectations.

- Synthasys believes in an open, honest relationship with our clients, focusing on your goals, time requirements and budgetary constraints.

- We promise to respond to your organizational needs and requirements with consistent communication and timeliness.

- We believe in transferring the knowledge of our professional consultants to your internal staff.

What Can Synthasys Do for Your Organization?

Our consultants are fluent in the full project life cycle and are readily available to provide leadership, knowledge and support in all of your JD Edwards application and technical needs.

Project Management
We can facilitate the entire implementation or assist in a particular area, tracking milestones, time, resources, issues and change management.

Business Process Analysis
We will review your current processes, policies and procedures, recommending solutions to achieve more efficient and effective results.

Post-Implementation Review
Our review of your software and business practices includes interviews, documentation review and flowcharting. This will be performed to develop a "Best Practices" forum in your organization, delivering a formal report upon conclusion outlining issues, solutions and next steps.

Interface Design/Development
From business requirements, through specifications, design, development, testing and documentation, we can provide the full interface life cycle.

Integrating Systems
Design, review and re-engineering of all internal systems for a completely integrated system.

Upgrade Assistance
The latest releases of your software will be upgraded seamlessly by our professionals. We can review existing code for integration points, customization, and hard-coding to make intelligent suggestions for the quickest, most efficient manner in which to proceed.

In-Process Project Review
If you already have a project in process, Synthasys can provide value-added services that can identify shortfalls of the existing project plan, validate the critical path and share known pitfalls.

Customized Training
Using your data and your facility, Synthasys can create a custom training curriculum to speed up the knowledge transfer to your staff.

Custom Programming
Synthasys can provide tenured programmers to lead or assist your organization in its technical requirements.

Custom Documentation
Not "How does the software work?", but rather, "How do we use the software?", Synthasys can create documentation that is specific to your organization's use of the system.

Remote Support
Synthasys can cost-effectively provide remote technical and application support on a long-term or "as needed" basis.
